CEN 03/2018 (JE, DMS & CMA Posts)

Revised Normalization Formula

Vide Para 14.2 of detailed CEN 03/2018, a formula for calculation of normalized marks for multi session papers has been published. The formula has been further modified as below:

Normalization mark of the \( j \)th candidate in the \( i \)th session, \( \tilde{M}_{ij} \), is given by:

\[
\tilde{M}_{ij} = \frac{M_{ij} - M_{iq}}{M_{it} - M_{iq}} (M_{ti} - M_{iq}) + M_{iq}^{gm}
\]

- \( M_{ij} \): is the actual marks obtained by the \( j \)th candidate in the \( i \)th session.
- \( M_{ti} \): is the average marks of the top 0.1% of the candidates considering all sessions.
- \( M_{iq} \): is the sum of mean and standard deviation marks of the candidates in the paper considering all sessions.
- \( M_{it} \): is the average marks of the top 0.1% of the candidates in the \( i \)th topper if session strength is less than 1000.
- \( M_{iq} \): is the sum of the mean marks and standard deviation of the \( i \)th session.
- \( M_{iq}^{gm} \): is the sum of mean marks of candidates in the shift having maximum mean and standard deviation of marks of candidates in the examination considering all shifts.

Calculation of marks will be up to 5 decimals places.
